

5 Things You and Your Teen Should Know About The New Isolaz Acne Treatment

PAINLESS BREAKTHROUGH LASER THERAPY FOR DRAMATICALLY CLEARER SKIN

By Marta I. Rendon, M.D.

Q: What is Isolaz Acne Deep Pore Laser Therapy?

A: Isolaz Acne Deep Pore Laser Therapy is a new FDA cleared treatment for acne and is the world's only aesthetic technology that combines suction device with a painless laser. Isolaz uses a breakthrough technology called Photopneumatics™ to purify your pores from the inside out. Isolaz helps clear existing acne, prevent future breakouts and can help remove red, brown spots and tiny broken capillaries sometimes associated with rosacea. Isolaz is suitable for any age or skin type.

Q: How Does Isolaz Work?

A: Isolaz controls acne at the source by providing a unique combination of suction device and almost painless laser that helps clear existing acne while helping prevent future breakouts. The vacuum helps loosen and extract dirt, blackheads and excess oil from deep within your pores, while the painless laser helps destroy acne-causing bacteria, uneven skin tone, sun damaged skin, facial redness, veins and unwanted hair. Isolaz clinical studies show immediate results within 24-48 hours, including reduced redness and immediate dry/flattening of the blemish.

Q: What Should I Expect During my Isolaz Treatment?

A: Before the treatment begins, your skin will be hydrated with a soothing

mist. Since the treatment is painless you won't need pre-numbing. When the Isolaz tip is placed on your skin, you will feel a slight warm sensation. The process is repeated over the entire treatment area. In a recent clinical study, 100% of patients reported no pain during treatment and treatment sensation was most commonly described as being similar to that of a warm massage. There are no post-treatment regimes associated with Isolaz therapy. Once your treatment is complete, you are free to resume your normal activities and you can apply make up immediately. In fact, you may find that your skin takes on a healthy glow and feels cleaner right away.

Q: What Makes Isolaz Different From Other Acne Therapy Options?

A: In addition to controlling acne at the source, Isolaz also deep purifies your pores and helps with deep cleaning and skin rejuvenation. The vacuum applies gentle pressure on your pores, while the painless laser helps destroy the acne causing bacteria and reduces the size of your sebaceous glands. This helps soften and remove blackheads, dead cells and other debris from deep in your pores resulting in radiant, clear skin that is purified from the inside out.

Q: How Can I Learn More about The Isolaz Acne Deep Pore Laser Therapy?

A: For more information about Isolaz, visit Dr. Marta I. Rendon and Dr. Chere Lucas Anthony at the Dermatology and Aesthetic Center in Boca Raton, Fla. Dr. Rendon is the founder and medical director of the Dermatology and Aesthetic Center, is double board certified in dermatology and internal medicine and is past president of the American Society of Cosmetic Dermatology and Aesthetic Surgery.
