“We take pride in our results, whether it’s medical or aesthetic. We are honest with our patients and tailor the best treatment program for them to ensure that their end result is the best result.”

ESTABLISHED 1999

It’s not difficult to find a dermatologist in Boca Raton. But it is difficult to find one with the knowledge, experience and accomplishments of Dr. Marta I. Rendon.

Rendon, who founded the Rendon Center for Dermatology & Aesthetic Medicine in 1999, is a double board-certified physician who not only handles all of the dermatologic needs of her patients (including the treatment of hair and nail disorders) but also brings the latest cutting-edge treatments to Boca Raton by virtue of her participation in new research and treatment applications.

“We have a very unique practice,” says Rendon, who brings more than 25 years to the forefront of cosmetic dermatology. “We not only do general dermatology and aesthetic medicine, but we also have a big division that does research. And, on top of that, I’m very involved with the pharmaceutical industry, so we bring new technology to our patients—before it’s available to the general public.”

Rendon has been involved in clinical trials for psoriasis, rosacea and acne treatments and is an international physician trainer who instructs other dermatologists on the latest techniques.

Rendon is at the forefront of the hottest, the latest and the newest treatments. Other physicians may offer Sculptra, an anti-aging treatment, for example. But the Rendon Center was one of only 10 sites in the United States that did the original trials—so Rendon has been working with it for almost 10 years. If you want ultimate skin health, come visit the teacher, not the student.
